Referring to the recent annual breast cancer meeting worldwide for the practicing clinician, the Lynn Sage Breast Cancer Symposium: provides 3-5 days of formal presentations and interactive case discussions. For 19 years, this multidisciplinary CME program has been bringing together leading national and international medical, surgical, and radiation oncologists to present, debate, and evaluate cutting-edge technology and approaches in the management of breast cancer.

Progress across all aspects of patient care, including prevention, screening, detection, and survivorship, as well as in the primary treatment modalities of surgery, radiation therapy, endocrine therapy, cytotoxic chemotherapy, and novel biologic therapies are leading to new strategies and therapeutic options. The symposium focuses on the close cooperation required for effective multidisciplinary management of patients with breast cancer.

Educational Objectives
At the conclusion of this activity, participants will be able to:

» Practice current management approaches to high-risk breast tumors.

» Describe factors influencing the choice of initial therapeutic approaches—newer agent chemotherapy, mastectomy or neoadjuvant chemotherapy, and novel biologic therapies are leading to new strategies and therapeutic options. The symposium focuses on the close cooperation required for effective multidisciplinary management of patients with breast cancer.

» Identify the multidisciplinary challenges and opportunities associated with the use of newer agent chemotherapy in operable breast cancer.

» Apply optimal pain management strategies in patients with breast cancer.

» Employ optimal strategies for overcoming endocrine resistance by incorporating targeted therapies.

» Cite the clinical and molecular factors that determine the optimal duration of adjuvant endocrine therapy.

» Utilize optimal surgical and medical strategies in the elderly with breast cancer.
